

Paper Plate Swimming Jellyfish Craft

Supply List

Provided:

- 1 plate
- 5 pieces of string
- 1 popsicle stick
- 2 googly eyes
- 1 foam square
- 1 glue stick

Needed:

- Scissors or craft knife
- Pen or marker

Instructions

1. Draw the shape of a jellyfish's body on your small piece of foam and cut it out
2. Take your five pieces of string and cut each of them in half. These are your jellyfish's legs.
3. Have an adult use a craft knife or scissors to cut a slit in the paper plate about two thirds of the way down.
4. Turn your jellyfish body over and use the glue stick to attach the pieces of string along the bottom. These are your jellyfish's tentacles.
5. Next, glue the popsicle stick to the center of the back of the jellyfish's body, above the line of string.
5. Turn your swimming jellyfish craft over and glue on two googly eyes.
6. To make your jellyfish swim, place the craft down inside the slit in your paper plate. Hold the stick from behind the paper plate with one hand while balancing the paper plate with your other hand. When you move around the craft stick behind the paper plate your jellyfish swims around and around.
